# VTI PACKAGING COMPLIANCE STATEMENT

## PURPOSE

This statement provides general information regarding packaging used by VTI A/S in connection with the supply of wood products and outlines VTI's approach to regulatory compliance, including requirements under Regulation (EU) 2025/40 on Packaging and Packaging Waste (PPWR).

## VTI'S ROLE IN THE SUPPLY CHAIN

VTI A/S supplies semi-finished glue laminated wood to professional and industrial customers (B2B). Products are typically delivered using standard transport packaging intended to protect products during storage, handling and transportation.

VTI does not manufacture packaging materials as a standalone product category and does not market packaging independently from its products.

Packaging materials are sourced from European external suppliers and form part of the logistics and transport solution associated with the delivery of VTI products.

## TYPICAL PACKAGING COMPONENTS

Depending on product type and customer requirements, transport packaging may include:

- Wooden pallets
- Wooden bearers/spacers
- Polyethylene (PE) stretch film
- Product identification labels
- Other transport protection components where required

These packaging components are procured from approved suppliers and are subject to VTI's supplier qualification processes.

## PACKAGING COMPLIANCE MANAGEMENT

VTI is actively evaluating and implementing applicable requirements under Regulation (EU) 2025/40 (PPWR).
As part of this process, VTI:

- collects material specifications from packaging suppliers;
- requests information regarding compliance with REACH Regulation (EC) No. 1907/2006;
- requests information regarding Substances of Very High Concern (SVHC);
- requests declarations regarding PFAS and other relevant restricted substances where applicable;
- maintains documentation supporting material composition and environmental compliance;
- reviews packaging-related regulatory developments and customer requirements.

Supporting documentation is obtained through the packaging supply chain.

## CHEMICAL COMPLIANCE

Based on information received from packaging suppliers and available documentation, VTI seeks to ensure that packaging materials used for product deliveries comply with applicable European chemical regulations. Information requested from suppliers may include:

- REACH compliance declarations;
- SVHC declarations;
- PFAS declarations where relevant;
- Heavy metal compliance information;
- Material composition statements.

## COMMITMENT

VTI is committed to:

- responsible sourcing of packaging materials;
- continuous improvement of packaging sustainability;
- regulatory compliance;
- transparent communication with customers;
- supporting customers with relevant packaging information where available and applicable.

VTI will continue to monitor developments related to PPWR and will update its compliance approach as additional guidance, delegated acts and implementation requirements become available.

**NOTE:** VTI is furthermore recertifying under the Cradle to Cradle Certified® programme.
As part of this certification process, product and packaging related information has been reviewed, including material composition and chemical compliance information where applicable.
The certification process supports VTI's ongoing commitment to responsible material management and continuous improvement.

## AVAILABILITY OF SUPPORTING DOCUMENTATION

Where available and applicable, VTI may provide supporting documentation obtained from packaging suppliers, including:

- material specifications;
- REACH declarations;
- SVHC declarations;
- PFAS declarations;
- environmental certifications;
- other relevant packaging compliance information.

This statement is provided for general information purposes and does not constitute a Declaration of Conformity under Regulation (EU) 2025/40.

**NOTE**
The role and obligations of economic operators under Regulation (EU) 2025/40 may vary depending on the specific supply chain configuration, product application and packaging use case.
This statement is intended to provide general information regarding packaging used by VTI and should not be interpreted as a legal classification of VTI's role under PPWR for all customer-specific supply chains.
